

SELF-SERVICE TERMINAL

Abstract

A self-service terminal (20) for displaying advertisements is described. The terminal comprises a display (52) and a network connection (32). The terminal further comprises means for accessing an advertisement database (18) to retrieve an advertisement associated with the terminal (20), and means for incorporating the retrieved advertisement in a screen (130) for displaying on the display (52). The terminal (20) may be an ATM. A method of supplying an advertisement for displaying on a self-service terminal, and a system for controlling presentation of advertisements on a self-service terminal are also described.
